A report on the impact of the surgical treatment of scaphoid and lunate fractures on the long-term function of the wrist: a review of the literature. The main purpose of this study was to perform a review of the literature in order to evaluate the impact of the surgical treatment of fractures of the scaphoid and lunate on the long-term function of the wrist, and to analyse the current state of the art. A systematic review of the literature about the impact of the surgical treatment of fractures of the scaphoid and lunate on the long-term function of the wrist was performed by a review of the Medline database. A total of 2849 abstracts were screened for eligibility and 53 papers were reviewed in detail. Based on the literature, the current consensus is that there is a clear correlation between a loss of function and the presence of a non-union of the scaphoid and lunate. Surgeons must consider the surgical indication for acute fractures of the scaphoid and lunate in order to ensure a good long-term functional result.

Blockchain technology may soon change the world of the Internet of Things (IoT), though we still know little about it. The Internet of Things (IoT) is built upon smart systems that gather information and transmit it across the network. The world of IoT is rapidly growing in the public and private sectors. Businesses are using IoT to track assets, save energy and alleviate transportation and industrial waste. The technology is also sparking health and fitness trends like smart scales and

Field of the Invention This invention relates to remote meter reading of utility meters such as electric meters. 2. Background Utility meters such as electric meters are used to measure various characteristics of electricity such as kilowatt-hours or kilowatt-hours consumed by a power distribution system. Such meters include a sensing device for measuring the energy used by the power distribution system and a meter display to indicate that energy. Such meters are usually located outdoors and are usually read manually by an engineer or other utility personnel to determine the energy use of the power distribution system. Utility meters are often installed in areas that are difficult to access. Further, many utility meters, especially those that include a display, can be easily damaged. Accordingly, reading such utility meters can be time consuming, costly, and dangerous.The present invention relates to a transmitting device, and more particularly to a transmitting device for transmitting audio and video signals and system control signals. Recently, a transmitting device and a related computer system are generally installed in a vehicular field. For example, a transmitting device is required to be assembled into a vehicular power window system, and a related computer system is used to store map information of a vehicular navigation system. A main problem is how to efficiently design a transmitting device that has a small volume, a light weight, and a low cost. The present invention provides a transmitting device and a system having the transmitting device. The transmitting device comprises an extension tube. The extension tube is operable to be plugged into a receiving tube of a receiving module. A control module is assembled within the extension tube and is used to control operations of a plurality of functions. A power module is assembled within the extension tube and is used to control the operating power of the control module. The present invention will become clearer in the following descriptions by referring to the accompanying drawings.Q: How to use a const string with protected keyword outside class?
